EDUCATION

Bachelor of Science in Computer Science

March 2025

University of Washington | Bothell, WA

- GPA: 3.8 | Recognized among the Top 100 impactful students 2025 (Husky 100), Dean's List
- Relevant coursework: Data Structures and Algorithms, Database Systems, Technical Writing, Hardware and Operating System, Usability and User-Centered Design

TECHNICAL SKILLS

Certifications: AWS Cloud Practitioner, CompTIA Security+, CompTIA A+ (Taking in May)

Programming Languages: TypeScript, JavaScript (ES6), Python 3, Java, C++

Frameworks / Tools: React, Django, Vue, Node.js, AWS, Express.js, Linux/Unix, Docker

Other Knowledges: UX/UI Design, HTML5, CSS3, Postgres/SQL, ORM, Figma

WORK EXPERIENCE

IT Specialist

March 2026 – Present

Per Scholas

- Lead a team of 4 to deploy networked computer systems, setting up hardware, operating systems, and connectivity on premises
- Set up and configure local network infrastructure, including cabling and IP address assignment to ensure reliable LAN connectivity
- Deploy and manage virtual machines in both Linux and Windows environments for testing and system usage

USA Youth Ambassador

March 2025 – October 2025

U.S. Department of State

- Selected to represent Washington State and the United States at the USA Pavilion at World Expo 2025 in Osaka, Japan, welcoming and engaging with a site-wide audience of 29+ million visitors
- Shadowed IT and technology team to understand database management, workflow automation, and digital tools supporting global events operations
- Guided over 1,000 daily visitors, including international delegations and leaders, in a customer service role to ensure positive visitor experience

Full Stack Developer

March 2024 – March 2025

University of Washington

- Built full stack Django webapp using a trained machine learning model to identify cells undergoing mitosis for biologists to help identify the cause of cell mutation
- Developed a first-of-its-kind automated DNA alignment process, speeding biologists' workflow by 80%
- Improved machine learning process by 40%, optimizing TensorFlow models and code import

TECHNICAL PROJECTS

Rover's Mission Control System *Vue, TypeScript, Robot Operating System (ROS), Python*

[GitHub](#)

- Led a team of 6+ to design and deploy the system responsible for communicating with the rover, displaying real-time data and executing commands remotely
- Refactored and restructured entire codebase, drastically improving maintainability and understandability
- Improved mission control's latency by 50% through data compression and automatically disabling data streams when not needed
- Led weekly scrum meetings and onboarded 30+ new members about the codebase and rover

Volunteer Event Platform *React, TypeScript, NodeJS, MySQL, AWS*

[GitHub](#)

- Authorized non-profit organizations to create events for signed-up users to search and register for
- Built and hosted CRUD REST API on an AWS Linux virtual machine, secured with an SSL/TLS certificate
- Integrated Google Maps Platform to create interactive maps
